DOCUMENT REF: IDG-GOV-DATA-2026

Category: Data Governance | Classification: Sovereign Official | Release Year: 2026

National Data Governance & Classification Charter

1. Legislative Scope & Sovereign Data Mandate

This Charter establishes the binding regulatory and legal framework governing national sovereign data assets. All citizen records, financial data, and economic telemetry are classified as inviolable national property under Iraqi jurisdiction.

- Absolute constitutional prohibition on transferring sovereign data across foreign territorial boundaries.
- Mandatory adherence by all federal ministries to IDG standardized classification schemes.
- Strict legal penalties for unauthorized disclosure or cross-border data leakage.

2. Four-Tier National Classification Matrix

All state information assets are categorized into four standardized tiers:

- Tier 1 (Public): Unclassified public information, statistical data, and official releases.
- Tier 2 (Internal): Inter-agency operational workflows and administrative communications.
- Tier 3 (Restricted): Financial, banking, taxation, and citizen identification records.
- Tier 4 (Top Secret): National security, critical infrastructure telemetries, and defense data.

3. Citizen Rights & Immutable Audit Trails

Citizen digital privacy is guaranteed by sovereign law, with immutable cryptographic ledgers recording every data access event.

SOVEREIGN CERTIFICATION & INSTITUTIONAL SEAL

This document is formally ratified by the IDG Engineering Council and Governance Directorate. Full technical adherence is mandatory across all connected platforms.
